

Precast concrete process

Stage 1

Concrete Waste Conveyor

Waste from precast production

Sand Separator

Sand and aggregates
>1 mm particles
*to e.g. land filling
or concrete production*

Slurry
(cement, sand, water)
<1 mm particles

Stage 2

Settling Plant

pH control
flocculation
sedimentation

Clean water

Concrete
Batching and
Mixing Plant

Sediment

Concrete to
the precast process

Water

Stage 3

Filter Press

Filtered Slurry Cake
to e.g. soil improvement
