

BedMaster EL 411

Ensure better product quality by preparing the bed automatically.

Brush for bed.

BedMaster EL 411

The Elematic BedMaster is a multipurpose machine used in hollow-core slab production. The machine maintains and cleans the casting bed, and also prepares it for the casting process.

It does all the work needed on the bed in-between castings and suit both for extruder and slipformer lines. The BedMaster is equipped with a four-wheel drive and moves along the bed at a rate of 60 m per minute.

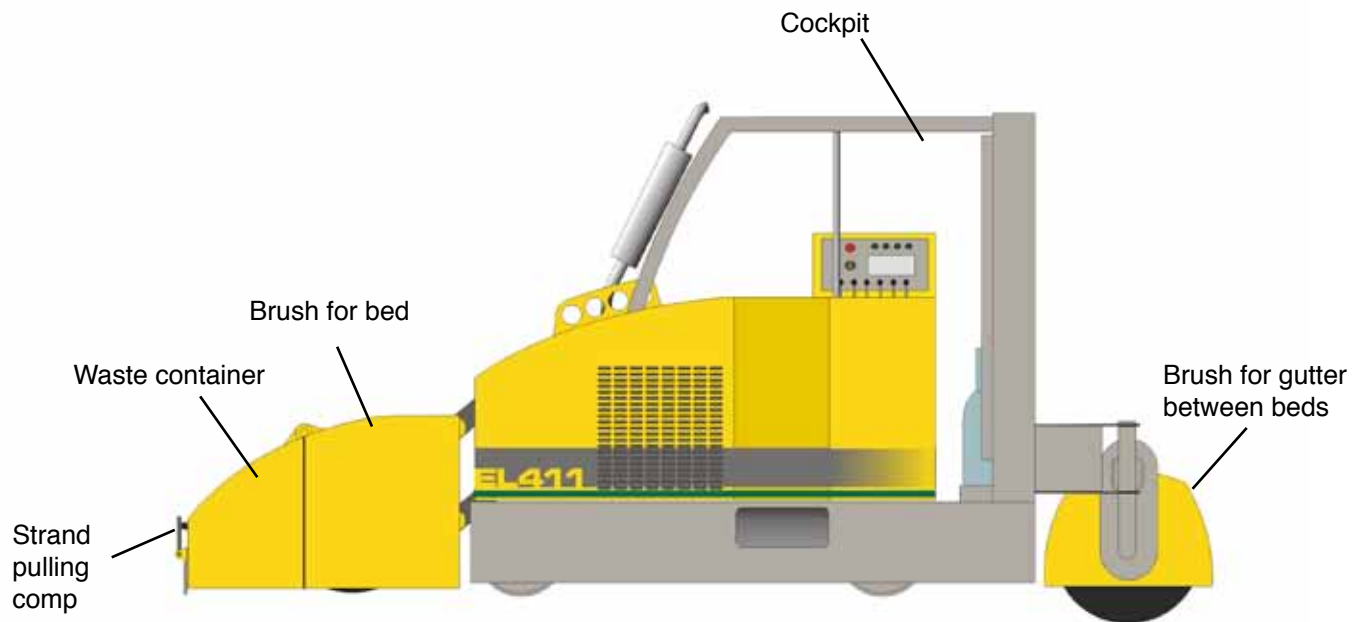

Brush for gutter between beds.

BedMaster is an efficient and user friendly multipurpose machine.

BedMaster EL 411

General data

The EL 411 cleans the casting bed after a ready hollow-core slab has been removed. It sprays water onto the bed and works through it with a brush and wiper, thoroughly removing all dirt.

Detailed data

- length 4210 mm
- height 2300 mm
- width 1600 mm

Includes:

- brush for bed
- strand pulling components
- tip-over waste container
- bed scraper
- brush for gutter between beds
- cockpit
- bed oiling equipment
- oil wiper

Advantages:

- healthier working environment – minimizes dust and harm.
- versatile cleaning facilities – brush, scraper, water feeding, waste container.
- user friendly - the operation desk is designed simple to use.
- easy to maintain.
- efficient and enduring – strand pulling speed 30 m/min and oiling speed 60 m/min.

Due to the powerful motor and robust structure it is fast and powerful enough to factories with many casting beds.
